

Your Glulam specialist since 2005

Glulam Timber Engineering has been stocking Glulam softwood sections, and designing, manufacturing and delivering high-quality Glulam products since 2005. We offer a complete design packing, taking your concept and creating a clear visual representation to ensure our vision aligns with yours.

Detailed plans are then prepared, and our production team manufactures and cuts all straight beams to length, ensuring your Glulam product is delivered on time and precisely to specification.

Glulam Beams

We design, manufacture, and engineer custom Glulam pieces and beams for a wide range of projects.

Benefits of using Glulam include:

- Inherent load bearing strength.
- Ability to design large wooden spans to create open spaces.
- An eco-friendly alternative to concrete and steel.
- Durable, light and easy to handle.
- Requires no boxing in or cladding.
- Glulam is more stable in a fire than steel - we know how quickly timber burns whereas steel can fail at anytime.
- Competitive price makes it a clear choice for all types of construction.

Feature Trusses

Glulam Timber Engineering have many years' experience designing and manufacturing Glulam Feature Trusses in a wide range of styles.

We can combine our engineering expertise with traditional carpentry skills to produce custom made, heavy section feature trusses.

Hand made from Glulam, we create styles and detailing that will suit your specific environment. To include:

- Design consultation and appraisal.
- Bespoke design to your requirements.
- Full structural calculations.
- Detailed drawings.
